

SKILLS SUMMARY

- **Languages:** JavaScript, TypeScript, HTML5, CSS/SASS
- **Frameworks:** Node.js, React.js, Next.js, Redux, Tailwind, Jest, TypeORM
- **Tools:** PostgreSQL, MongoDB, Git, SDLC, Design Patterns, OOP, RESTful API design
- **Platforms:** Visual Studio Code, Jira, Slack, Confluence, AWS(Lambda, S3, DynamoDB)
- **Soft Skills:** Strategic planning, Ownership, Highly motivated, Cross-functional collaboration, Good communication

WORK EXPERIENCE

Full Stack Developer | SalientMinds Technologies | [LINK](#) June 2024 - Present

Xnode AI | [LINK](#)

- Contributed to product planning from ideation to execution, providing technical insights that shaped the product roadmap and improved feature delivery timelines by 20%.
- Optimized AI chat functionality by improving component rendering, lazy loading, and API response times, achieving a 25% boost in load speed and enhancing user experience.
- Developed admin and entity admin pages with workspace and user management functionalities, reducing manual onboarding time by 50%, resulting in a 30% increase in team productivity.
- Improved BRD document functionality by 40% through optimized page rendering and introducing editable capabilities for text, mermaid diagrams and tables using Editor.js.

Software Development Engineer - 2 | Mrikal Studios | [LINK](#) January 2023 - April 2024

Medvol Corps

- Implemented Event-Driven Architecture (EDA) to build loosely coupled systems, improving scalability by 40% and reducing latency by 20%.
- Developed a bulk upload system via Excel sheets using AWS Lambda and AWS S3 event triggers, reducing manual upload time by 40%.
- Leveraged memoization, code splitting, and tree-shaking techniques to optimize frontend performance, achieving a 35% reduction in bundle size and significantly improving application load times.
- Optimized database queries through indexing and refactoring, reducing query execution time by 40% and improving application performance.
- Integrated Sentry in backend for error tracking and monitoring, reducing production issue resolution time by 30% through real-time alerts and detailed error logs and enhancing application stability.

BYOB (Build Your Own Brand)

- Engineered end to end resume-building platform using Next.js and Node.js, improving system performance by 30%.
- Utilized Google Docs and Google Drive APIs to generate and automate creation of standardized resumes, increasing resume creation efficiency by 30%.
- Championed the adoption of AWS DynamoDB, resulting in a tenfold improvement in data replication speed and enabling the support of 500+ concurrent users without any performance bottlenecks.
- Engineered server-side rendering (SSR) implementation leveraging Next.js, decreasing initial page load time by 60% and boosting user engagement across mobile and desktop platforms.

Senior Software Developer | Antino Labs | [LINK](#) December 2020 - January 2023

- Collaborated as a Front End Software Engineer with product managers, designers, and backend teams with a strong focus on UI/UX to deliver features aligned with business goals, ensuring timely project delivery.
- Translated wireframes and mockups into fully functional and responsive ERP portal, improving operational efficiency by 40%.
- Conducted thorough testing and debugging using Jest, achieving 95% test coverage and reducing production bugs by 30%.
- Utilised Storybook for component documentation and testing, ensuring consistency across 50+ reusable components.
- Validated and sanitized user input on the client-side using Yup to prevent Cross-Site Scripting (XSS) attacks.

Freelance February 2020 - December 2020

- Built a scalable eCommerce platform using React.js, Redux and Material UI enabling seamless user interactions.
- Optimized product pages using lazy loading and infinite scroll, reducing load time by 40% and improving user engagement.
- Integrated payment gateways (Cashfree) for seamless checkout, increasing conversion rates by 20%.

ACHIEVEMENTS

Plant Jammer Hackathon | [CERTIFICATE](#) December 2020

- Won the Best Product award for creating a solution to reduce food waste by enabling users to cook with available ingredients using the Plant Jammer gastronomical GraphQL API.
